Teaching Assistance

- I have solved more than 1000 doubts, regarding Frontend and Backend.
 - Debugged their code, and provided a new approach for the same problem.
- May/2023 - Aug/2023

FeynnLabs I Remote I LOR

Machine Learning Intern

- Here I have worked on the Electric Vehicle Market Segmentation project
 - In that project, I have engaged in data exploration, model development, and evaluation.
 - Gained practical knowledge in Data preprocessing and feature selection.
- 08/2021 - 09/2021

Exposys DataLabs I Remote

Machine Learning Intern

- Diabetes-Prediction-model by using Python
 - Prepare the data-set using several methods to train the model.
 - Buildamodelwhich can give high accuracy of predicting the disease.

Projects

- Detection of Phishing Websites using an ML Approach - Python
- Group Project || 3 members || Under Dr. Bappaditya Mondal, NITMAS, CSE Dept.
- The aim of the project is to detect phishing URLs.
 - Here we can check which website is fraud and which is legitimate
 - Tech Used:- Python and ML Algorithm like SVM, logistic Regrassion, Random Forest, Decision Tree.
- Compare ML algorithms based on accuracy, false positive rate, and false negative rate.
- Credit Card_fraud_detection || ML Project - Python
- CourseProject||UnderDr.DebasisGiri,WBUT,ITDept.
- My main moto is how to identify fraud transaction
 - here the banks can check which credit card transaction is fraud and which one is legitimate.
 - Tech Used:- Anomaly detection, supervised learning algorithms like logistic regression or random forests, and resampling methods to address the class imbalance can be used to achieve this goal.

- Electric Vechical Market Segmentation - Python
- GroupProject||4members||Under FeynnLabs.
- This is a team task where the job is to analyse the Electric Vehicle market in India using Segmentation analysis and come up with a feasible strategy to enter the market, targeting the segments most likely to use Electric vehicles. Tech Used:- EDA, Elbow method, Clustering
 - algorithm (K-Mean Clustering Algorithm).

- Diabetes-Prediction-Project - Python || Under Exposys Data Labs
- here Doctors can predict Diabetes with some random values, The input_data format = (Glucose level, Insulin, BMI, Diabetes PF, Age). Prediction value is '1' means diabetic '0' means not diabetic.
 - Tech Used:- KNN, SVM, Naïve Bias algorithms.
 - Modules/libraries- Numpy, Pandas, Matplotlib, Seaborn, Scikit-learn
